LightSpeed Solutions

LightSpeed Solutions communicates exciting innovations and thought leaders' perspectives regarding technologies, policy, social value, business, and commercialization on the journey to marketable and sustainable options for restoring the carbon balance or closing the carbon cycle. We are passionate about capturing CO₂ from the atmosphere, recycling CO₂, and addressing CO₂ in a waste management paradigm as opposed to a pollution paradigm. Together we can complete the cycle and restore carbon balance to overcome urgent energy and climate challenges with CO₂ as a feedstock for fuels and other products, while disposing what cannot be used profitably. ASU's LightSpeed Solutions most recently supported the "Restoring the Carbon Balance" initiative to call attention to removing CO₂ directly from air, needed to ultimately meet climate goals.

Stay tuned for future webinar series.
